| Diameter | 110mm |
| Weight | 0.3Kg |

About FCam XCR Air Curtain

The FCam XCR Air Curtain is an optional accessory for the XCR range of flame detection cameras. When connected to a suitable compressed air supply on site, the air curtain provides a steady airflow across the lens, preventing dust and contaminant build-up.

The CXAPU-01 is supplied complete with a filter-regulator unit which must be connected inline with the device (hose not supplied, length must be selected on site).
